

Egypt Institute For Community Ophthalmology EICO

Basics in Research

3-day course

Aims:

Provides an understanding to the fundamentals of research and helps participants to develop skills and competencies in the conduct of research based on the demands of the health care work force and the public.

Intended Learning Outcome (ILOs):

Upon completion of this course, the participant is expected to:

1. Distinguish between different types of study design
2. Interpret the language and terminology related to different types of study design.
3. Apply the process of recruitment of subjects, data collection and management.
4. Select the method of data analysis according to the study design
5. Interpret her/his findings in the light of the available literature.

Target audience:

This course is designed to accommodate the needs of different research team members that may include:

- University junior teaching-staff Ophthalmologists, Optometrists, College-graduate nurses
- Epidemiologists and Biostatisticians
- Community Medicine-staff, Field-Project Managers
- Coordinators and Research assistants

Learning Experience:

The course will use Scenario-based teaching which uses interactive scenarios to support active learning strategies such as problem-based learning.

Participants will work in small groups and will share learning with their peers.

Groups will explore and validate their conception and perceptions using a reality based scenarios with the support of the course facilitators.

Assessment components

- Quizzes
- Scenario Presentation and discussion

Course Duration:

- 15 teaching hours
